1. Aim

To design and build a functional Recruitment & Job Application Management application in Zoho Creator using all thirteen Basic Fields available in the Form Builder. The application is designed to collect candidate personal details, contact information, employment preferences, work experience, skills, interview availability, and consent for background verification in a structured digital format.

2. Problem Statement

Organizations often receive job applications through different channels such as email, walk-ins, referrals, resumes, and messaging platforms. Since applications are received in different formats, the HR team may find it difficult to organize candidate information, compare applicants, filter them based on department or skills, and schedule interviews efficiently.

The proposed solution is a single online Job Application Form developed using Zoho Creator. The form collects structured information such as candidate name, contact details, department applied for, employment preference, work experience, skills, joining date, preferred interview time, cover letter, and background verification consent. The submitted information is stored in a report that can be reviewed by the HR recruitment team.

3. Scope of the Use Case

Application	Recruitment & Job Application Management
Form	Job_Application_Form
Primary Users	Job Candidates / HR Recruitment Team
Report View	Candidate_Application_Report
Report Objective	Review, filter, shortlist, and schedule interviews for candidates

4. Business Data Model

The Job Application Form acts as the main data-entry interface of the application. Each field represents an important attribute of a job application. When a candidate submits the form, the entered information is stored as a structured record in Zoho Creator. The HR recruitment team can later use these records to review applicants and filter candidates based on job department, experience, employment preference, and skills.

Core Entity: Job Application → Personal Details + Contact Details + Job Preference + Experience + Skills + Interview Details + Background Verification Consent

5. Basic Field Mapping – All 13 Fields

The following design uses every Basic Field listed in the exercise and assigns each one a clear role in the recruitment application.

#	Basic Field	Form Field Name	Purpose / Example
1	Name	Candidate_Name	Captures the candidate's first and last name
2	Email	Email_Address	Validated email for communication
3	Address	Current_Address	Candidate's current residential address
4	Phone	Contact_Number	Mobile number for HR communication
5	Single Line	LinkedIn_Profile	LinkedIn or portfolio profile
6	Multi Line	Cover_Letter	Candidate's explanation of suitability for the role
7	Number	Years_Of_Experience	Total number of years of work experience
8	Date	Available_Joining_Date	Earliest date on which the candidate can join
9	Time	Preferred_Interview_Time	Candidate's preferred interview time
10	Drop Down	Department_Applied_For	Department selected by the candidate
11	Radio	Employment_Type_PREFERRED	Full-Time / Part-Time / Internship
12	Multi Select	Key_Skills	One or more skills selected by the candidate
13	Checkbox	Background_Verification_Consent	Candidate's consent for background verification

6. Section-wise Form Design

Section	Fields
Section A – Personal Details	Candidate_Name; Current_Address; Contact_Number
Section B – Contact & Online Presence	Email_Address; LinkedIn_Profile
Section C – Job & Experience Details	Department_Applied_For; Employment_Type_PREFERRED; Years_Of_Experience; Key_Skills; Available_Joining_Date
Section D – Interview Scheduling & Consent	Preferred_Interview_Time; Cover_Letter; Background_Verification_Consent

7. Field Choices Configured

Field	Configured Choices
Department Applied For – Drop Down	Software Development; Data Science; Human Resources; Finance; Marketing
Employment Type Preferred – Radio	Full-Time; Part-Time; Internship
Key Skills – Multi Select	Java; Python; React; SQL; Communication
Background Verification Consent – Checkbox	I Agree

8. Validation Rules

Field	Validation / Configuration
Candidate_Name	Mandatory; candidate must enter first and last name
Email_Address	Mandatory; built-in email validation
Contact_Number	Mandatory; phone field used for candidate communication
Department_Applied_For	Mandatory; one department must be selected
Employment_Type_Preferred	Mandatory; one employment type must be selected
Years_Of_Experience	Numeric value between 0 and 40
Available_Joining_Date	Past dates should not be accepted
Background_Verification_Consent	Mandatory; candidate must provide consent before submission

9. Workflow Summary

1. The candidate opens the Job_Application_Form.
2. The candidate enters personal and contact information.
3. The candidate selects the department and preferred employment type.
4. The candidate enters work experience and selects relevant skills.
5. The candidate specifies the available joining date and preferred interview time.
6. The candidate enters a cover letter and provides background verification consent.
7. Zoho Creator validates all mandatory fields and field formats.
8. On clicking Submit, a new candidate record is created.
9. The submitted data becomes available in the Candidate Application Report.
10. HR can review and filter candidates using department, skills, employment type, and other details.
11. An acknowledgement email can be sent to the candidate using the Email Address field.

10. Sample Business Record

Attribute	Sample Value
Candidate_Name	Lalitha B
Email_Address	Lalitha.b.2024.csbs@gmail.com
Current_Address	No 17 surya apartments mylapore
Contact_Number	+91 9566623857
LinkedIn_Profile	linkedin.com/in/Lalitha
Department_Applied_For	Software Development
Employment_Type_Preferred	Full-Time
Years_Of_Experience	3
Key_Skills	Java, React, SQL, Communication
Available_Joining_Date	10-Oct-2026
Preferred_Interview_Time	3:30 PM

Cover_Letter	I have three years of experience in full-stack development and have worked on multiple software projects.
Background_Verification_Consent	I Agree

11. Implementation Evidence

The following screenshots provide evidence of the actual implementation of the Recruitment & Job Application Management application in Zoho Creator. Replace each placeholder below with the corresponding screenshot captured during the form creation process.

12. Expected Learning Outcomes

- Understand the purpose and usage of the thirteen Basic Fields available in Zoho Creator.
- Learn how to build a structured business form using a low-code platform.
- Organize a form into logical sections for improved usability.
- Configure mandatory fields, choices, and field-level validations.
- Understand the use of Drop Down, Radio, Multi Select, and Checkbox fields.
- Understand how submitted form data is converted into structured records.
- Learn how reports can be used to review and filter submitted applications.
- Understand how low-code applications can digitize manual HR processes.

13. Result

The Recruitment & Job Application Management application was successfully designed and developed using Zoho Creator. The Job_Application_Form uses all thirteen Basic Fields specified for the exercise and is organized into four logical sections. The required mandatory fields, selection choices, and validations were configured, and candidate information submitted through the form is stored as structured records for HR review.

Conclusion

This experiment demonstrates how a traditional job application process can be converted into a structured low-code application using Zoho Creator. Candidate information such as personal details, contact information, job preferences, experience, skills, interview availability, and background verification consent can be collected through a single digital form. The resulting application provides a simple and organized method for HR teams to collect, review, filter, and shortlist job applications.
